

**STELLA MARIS COLLEGE (AUTONOMOUS) CHENNAI – 86**  
**(For candidates admitted from the academic year 2023 – 2024 & thereafter)**

**M. Sc. DEGREE EXAMINATION, APRIL 2026**  
**BRANCH IV- CHEMISTRY**  
**SECOND SEMESTER**

**COURSE : CORE**  
**PAPER : COORDINATION CHEMISTRY**  
**SUBJECT CODE : 23CH/PC/CO24**  
**TIME : 3 HOURS** **MAX. MARKS: 100**

Q. No.	SECTION A Choose the correct answer. (10 x 1 = 10 marks)	CO	KL
1.	The number of possible isomers of a square planar complex [Mabcd] is a) 1                                      b) 2                                      c) 3                                      d) 4	1	1
2.	The formula for a complex formed in brown ring test for the detection nitrate ion in qualitative analysis is a) [Fe(H <sub>2</sub> O) <sub>5</sub> NO]SO <sub>4</sub> b) [Fe(H <sub>2</sub> O) <sub>5</sub> (SCN)]SO <sub>4</sub> c) [Fe(NH <sub>3</sub> ) <sub>5</sub> NO]SO <sub>4</sub> d) [Fe(H <sub>2</sub> O) <sub>4</sub> (NH <sub>3</sub> )NO]SO <sub>4</sub>	1	1
3.	In octahedral complex for sigma donor ligands the metal 'd' orbital which is non-bonding in nature is/are a) a <sub>1g</sub> , t <sub>2g</sub> b) t <sub>1u</sub> , t <sub>2g</sub> c) a <sub>1g</sub> , e <sub>g</sub> d) t <sub>2g</sub>	1	1
4.	In tetrahedral complex for sigma donor ligands the metal 'd' orbital which is non-bonding in nature is/are a) a <sub>1</sub> , t <sub>2</sub> b) t <sub>1</sub> , t <sub>2</sub> c) e                                      d) t <sub>2</sub>	1	1
5.	Number of chelate rings present in [Ni(HDMG) <sub>2</sub> ] (including H-bonded chelate) a) 1                                      b) 2                                      c) 3                                      d) 4	1	1
6.	At low temperature the complex [NiCl <sub>2</sub> (PPh <sub>3</sub> ) <sub>2</sub> ], is a) square planar, diamagnetic                                      b) square planar, paramagnetic c) tetrahedral, diamagnetic                                      d) tetrahedral, diamagnetic	1	1
7.	The type of isomerism exhibited by nitropentammine chromium (III) chloride is a) Linkage isomerism                                      b) ionization isomerism c) optical isomerism                                      d) hydrate isomerism	1	1
8.	The ground state term symbol for Sm(III) ion is a) <sup>6</sup> H <sub>5/2</sub> b) <sup>6</sup> H <sub>7/2</sub> c) <sup>6</sup> H <sub>3/2</sub> d) <sup>5</sup> H <sub>7/2</sub>	1	1
9.	The μ <sub>obs</sub> of [MnBr <sub>4</sub> ] <sup>2-</sup> is 5.9 B.M. The number of unpaired electrons are a) 2                                      b) 3                                      c) 4                                      d) 5	1	1
10.	The reaction of [Ni(CO) <sub>4</sub> ] with the ligand L (L= PMe <sub>3</sub> ) yields [Ni(CO) <sub>3</sub> L]. The reaction is a) Associate                                      b) Dissociative                                      c) I <sub>a</sub> d) I <sub>d</sub>	1	1

<b>SECTION B</b>			
Q. No.	Answer ALL the questions. (10 x 1 = 10 marks)	CO	KL
	<b>Fill in the blanks.</b>		
11.	CFSE of $[\text{Co}(\text{H}_2\text{O})_6]^{3+}$ is -----	2	2
12.	$\text{Fe}_3\text{O}_4$ is an example of ----- spinel.	2	2
13.	ESR requires higher energy than NMR because -----	2	2
14.	Magnetism in permanganate is due to -----	2	2
15.	d1(octahedral) is kinetically ----- in nature	2	2
	<b>Answer in a line or two.</b>		
16.	Why Fluoride is weaker ligand than water?	2	2
17.	What is mean by nephelauxetic effect?	2	2
18.	Why $\mu_{\text{observed}} \neq \mu_{\text{calculated}}$ in the case of Sm(III) and Eu(III)?	2	2
19.	What is mean by reorganization energy?	2	2
20.	Compare the magnetic property of oxy and deoxy-hemoglobin.	2	2
<b>SECTION C</b>			
Q. No.	Answer any FOUR questions. (4 x 6 = 24 marks)	CO	KL
21.	a) Draw the possible stereoisomers for the octahedral complex $[\text{Ma}_2\text{b}_2\text{cd}]$ where a, b, d and c represents monodentate ligands. (4) b) What are flexidentate ligands? Give examples. (2)	3	3
22.	Explain the ESR spectrum of bis(salicyaldimine)Copper (II). Why the total number of lines are reduced in the real spectrum?	3	3
23.	Calculate the $\mu_{\text{so}}$ and $\mu_{\text{L+S}}$ values for $[\text{CoF}_6]^{3-}$ , $[\text{Co}(\text{NH}_3)_6]^{3+}$ and $[\text{TiCl}_4]^{3-}$ . (3x2)	3	3
24.	a) The complex $[\text{Cr}(\text{H}_2\text{O})_6]^{2+}$ is labile, but the complex $[\text{Cr}(\text{CN})_6]^{4-}$ is inert. Explain. (3) b) The rate of aquation of $\text{cis}-[\text{Co}(\text{en})_2(\text{OH})\text{Cl}]^+$ is faster than $\text{cis}-[\text{Co}(\text{en})_2(\text{NH}_3)\text{Cl}]^{2+}$ . How does it happen? (3)	3	3
25.	Describe the biological functions of haemoglobin and myoglobin. (3+3)	3	3
<b>SECTION D</b>			
Q. No.	Answer any FOUR questions. (4 x 8 = 32 marks)	CO	KL
26.	a) The observed lattice energy of octahedrally coordinated crystals of FeO is -3923 kJ/mol. The lattice energy of the crystal in the absence of CFSE is found to be -3856 kJ/mol. Calculate CFSE of FeO. (3) b) Why CO is considered as strong ligand than ammonia? (2) c) Is it true that pi-donor ligands are pi-acceptor in nature? Justify your answer. (3)	4	4
27.	a) The electronic spectrum of $[\text{CrF}_6]^{3-}$ shows three bands at 14,900, 22,400 and 34,800 $\text{cm}^{-1}$ . Calculate the $\Delta_o$ of the complex. (2) b) Discuss the spectra of $d^1$ and $d^9$ ions in octahedral and tetrahedral complexes. (3+3)	4	4
28.	Predict the magnetic moments of the following complexes: (4x2) i) $[\text{Cr}(\text{H}_2\text{O})_6]^{2+}$ ii) $[\text{Cr}(\text{CN})_6]^{4-}$ iii) $[\text{Ni}(\text{CO})_4]$ iv) $[\text{NiCl}_4]^{2-}$	4	4

29.	<p>a) In the following redox reaction with <math>K_{\text{equ}} = 2.0 \times 10^8</math>.  <math>[\text{Ru}(\text{NH}_3)_6]^{2+} + [\text{Fe}(\text{H}_2\text{O})_6]^{3+} \rightleftharpoons [\text{Ru}(\text{NH}_3)_6]^{3+} + [\text{Fe}(\text{H}_2\text{O})_6]^{2+}</math>            The self-exchange rates for the oxidant and reductant are <math>5.0 \text{ M}^{-1}/\text{s}</math> and <math>4000 \text{ M}^{-1}/\text{s}</math> respectively. Calculate the rate constant for the above reaction. (4)</p> <p>b) Aqueous Cr(II) effects one electron reduction of <math>[\text{Co}(\text{NH}_3)_5\text{Cl}]^{2+}</math> giving compound X. The compound X undergo rapid hydrolysis in to Y. Predict the compounds X and Y. (4)</p>	4	4
30.	<p>a) Outline the biological importance of trace elements. (4)</p> <p>b) Explain the important functions of Rubredoxin and Ferredoxin. (4)</p>	4	4
<b>Q. No.</b>	<b>SECTION E</b>	<b>CO</b>	<b>KL</b>
	<b>Answer the following questions. (2 x 12 = 24 marks)</b>		
31.	<p>a) Explain the following: (3x2)</p> <p>i) The macrocyclic effect;</p> <p>ii) The outer orbital octahedral complex are labile;</p> <p>iii) The inner orbital octahedral complex containing at least one empty 'd' atomic orbital in the t<sub>2g</sub> set are labile.</p> <p>b) Arrange the following complexes in the order increasing <math>\Delta_o</math>. (3)  <math>[\text{Cr}(\text{H}_2\text{O})_6]^{+2}</math>; <math>[\text{Rh}(\text{H}_2\text{O})_6]^{+3}</math>; <math>[\text{Co}(\text{H}_2\text{O})_6]^{+3}</math>;  <math>[\text{Ir}(\text{H}_2\text{O})_6]^{+3}</math>; <math>[\text{Fe}(\text{H}_2\text{O})_6]^{+2}</math></p> <p>c) The observed <math>\Delta_o</math> is greater than the pairing energy for the complex of Rh(II). Calculate its CFSE and pairing energy. (3)</p> <p style="text-align: center;"><b>(OR)</b></p>	5	5
32.	<p>a) Predict the ground state terms for the following configurations: (8)</p> <p>i) d<sub>8</sub> (Oct. field);</p> <p>ii) high spin and low spin d<sup>5</sup> (oct.field);</p> <p>iii) high spin and low spin d<sup>4</sup> (oct field)</p> <p>b) Draw the Orgel diagram for V(III) (aqu) and Cr(III) (aqu). Give the number of transitions with its assignment and energy involved in it. (4)</p>		
33.	<p>a) Discuss the magnetic behavior of <math>[\text{CoCl}_4]^{2-}</math> and <math>\text{Co}(\text{H}_2\text{O})_6^{2+}</math>. (4)</p> <p>b) How do you explain the fact that d<sup>2</sup> and d<sup>8</sup> configuration have same general ground state term but not the same J value? (4)</p> <p>c) <math>\mu_{\text{observed}}</math> for <math>[\text{NiCl}_4]^{2-}</math> is 2.83 BM, whereas <math>[\text{PdCl}_4]^{2-}</math> is zero BM, but both will have same number of 'd' electrons. Explain. (4)</p> <p style="text-align: center;"><b>(OR)</b></p>		
34.	<p>a) Compare the rate of hydrolysis reactions: (3x2)</p> <p>i) Neutral hydrolysis: <math>[\text{Co}(\text{NH}_3)_5 \text{X}]^{2+}</math> (Where X= F, Cl, Br, I)</p> <p>ii) Acid hydrolysis: <math>[\text{Co}(\text{NH}_3)_5 \text{X}]^{2+}</math> (Where X= F, Cl, Br, I)</p> <p>iii) Neutral hydrolysis: <math>[\text{Ir}(\text{NH}_3)_5 \text{X}]^{2+}</math> (Where X= F, Cl, Br, I)</p> <p>b) Predict the product A, B and justify your answer. (3)  <math>[\text{Cr}(\text{H}_2\text{O})_6]^{2+} + [\text{Co}(\text{NH}_3)_5 \text{Cl}]^{2+} \text{ ----- A} + \text{B}</math></p> <p>c) Predict the product C, D and justify your answer. (3)  <math>[\text{Cr}(\text{H}_2\text{O})_6]^{2+} + [\text{Rh}(\text{NH}_3)_5 \text{Cl}]^{2+} \text{ ----- C} + \text{D}</math></p>	5	5
