# STELLA MARIS COLLEGE (AUTONOMOUS) CHENNAI - 600086. 

(For candidates admitted during the academic year 2011-12)

## SUBJECT CODE : 11CM/AC/SB44

\section*{B.Com./B.Com(CS) DEGREE EXAMINATION APRIL 2013 <br> COMMERCE <br> CORPORATE SECRETARYSHIP <br> FOURTH SEMESTER <br> | COURSE | $:$ | ALLIED - CORE |
| :--- | :--- | :--- |
| PAPER | $:$ | BUSINESS STATISTICS |}

TIME : 3 HOURS
MAX. MARKS :100

## SECTION - A

ANSWER ALL THE QUESTIONS (10 $\times 3=30)$

1. What are the various components of time series and explain briefly each one of them.
2. Draw a figure to fit a trend line to the following data by free hand method.

| Year | $!996$ | $!997$ | $!998$ | $!999$ | 2000 | 2001 | 2002 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sales (‘000units) | 65 | 95 | 85 | 115 | 110 | 120 | 130 |

3. Calculate partial correlation
coefficients $r_{12.3}$ and $r_{23.1}$ using $r_{12}=.82, r_{13}=.77, r_{23}=.80$
4. State the limitations of multiple correlation.
5. The following data were calculated from 2 cities as regard the starting stipend paid to new management trainees. Do the data give evidence that the stipend paid in city B is significantly more than city A. Test at a significance level of $1 \%$.

City Monthly stipend mean Sample Std. deviation Sample size

| A | Rs. 1400 | Rs. 80 | 200 |
| :---: | :---: | :---: | :---: |
| B | Rs. 1600 | Rs. 120 | 175 |

6. In 600 throws of six faced dice, odd points appeared 360 times.Would you say that the dice is fair at $5 \%$ level of significance.
7. Define a Chi-square statistic and state where it is applied.
8. Under what conditions F-test can be applied.
9. What are the assumptions of Analysis of variance?
10. The information in regard to two makes A and B are given below:

|  | A | B |
| :--- | :---: | :---: |
| Sample size | 21 | 16 |
| Mean run life | 100 | 95 |
| Standard deviation | 2.5 | 1.5 |

The firm wants to know if the variance of two are significantly different by applying F-test at $5 \%$ level of significance.

## ANSWER ANY FIVE QUESTIONS

$(5 \times 8=40)$
11. Fit a trend line to the following data by the method of semi-average and forecast the sales for the year 2002.Also draw the required figure comparing trend line and the actual data.

| Year | 1993 | 1994 | 1995 | 1996 | 1997 | 1998 | 1999 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sales of firm <br> (1000 units) | 102 | 105 | 114 | 110 | 108 | 116 | 112 |

12. Use the method of monthly averages to determine the seasonal indices for the following data of production of a commodity bases on years 2006,2007,2008:

| Month | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sept | Oct | Nov | Dec |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 2006 | 12 | 11 | 10 | 14 | 15 | 15 | 16 | 13 | 11 | 10 | 12 | 15 |
| 2007 | 15 | 14 | 13 | 16 | 16 | 15 | 17 | 12 | 13 | 12 | 13 | 14 |
| 2008 | 16 | 15 | 14 | 16 | 15 | 17 | 16 | 13 | 10 | 10 | 11 | 15 |

13. On the basis of observations made on 35 copies plants the total correlations of yield of cotton $\mathrm{X}_{1}$, numbers of balls (ie) seed vessels $\left(\mathrm{X}_{2}\right)$ and height ( $\mathrm{X}_{3}$ ) are found to be $r_{12}=0.863, r_{13}=0.648, r_{23}=0.709$. Determine the multiple correlation $R_{1.23}$ and the partial correlation $r_{12.3}$ and $r_{13.2}$. and interpret your results.
14. Given the following, determine the regression equation of (i) $\mathrm{x}_{1}$ on $\mathrm{x}_{2}$ and $\mathrm{x}_{3}$.
(ii) $\mathrm{x}_{2}$ on $\mathrm{x}_{1}$ and $\mathrm{x}_{3} . r_{12}=.8, r_{13}=0.6, r_{23}=0.5, \sigma_{1}=10, \sigma_{2}=8, \sigma_{3}=5$.
15. An intensive coaching was given to11 students and they were examined twice in a month. The results of these two tests are given below. State whether there has been an improvement in the results of second test over first test at $5 \%$ level of significance:

| Serial | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Test-1 | 19 | 16 | 23 | 17 | 18 | 20 | 18 | 21 | 20 | 19 | 23 |
| Test-2 | 17 | 20 | 23 | 20 | 20 | 23 | 23 | 18 | 19 | 22 | 24 |

16. A certain drug is claimed to be effective in curing colds. In an experiment on 328 people with cold, half of them were given the drug and half them sugar pills. The patients reactions are recorded in the following table. Test the hypothesis that the drug is no better than sugar pills for curing colds.

|  | Helped | Harmed | No Effects |
| :--- | :---: | :---: | :---: |
| Drug | 104 | 20 | 40 |
| Sugar Pills | 88 | 24 | 52 |

17. The following table gives the yields on 15 samples plots under different plots under 3 varieties of seeds:

| $A$ | $B$ | $C$ |
| :--- | :--- | :--- |
| 20 | 18 | 25 |
| 21 | 20 | 28 |
| 23 | 17 | 22 |
| 16 | 15 | 28 |
| 20 | 25 | 22 |

Find out if the average yields of land under different varieties of seed show significant difference at 5\% l.o.s.

## SECTION -C <br> ANSWER ANY TWO QUESTIONS <br> $(2 \times 15=30)$

18. The following are the annual profits, in thousands of rupees, in a certain business:

Year: 1996199719981999200020012002 profits
$\begin{array}{llllllll}\text { (in '000) } & 60 & 72 & 75 & 65 & 80 & 85 & 95\end{array}$
a) Use the method of Least Squares to fit a straight line to the above data.
b) Also make an estimate of the profit for the year 2004.
19. Find the multiple linear regression of $X_{1}$ and $X_{2}$ and $X_{3}$ from the data relating to three variables are given below:

| $\mathrm{X}_{1}$ | 11 | 17 | 26 | 28 | 31 | 35 | 41 | 49 | 63 | 69 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{X}_{2}$ | 2 | 4 | 6 | 5 | 8 | 7 | 10 | 11 | 13 | 14 |
| $\mathrm{X}_{3}$ | 2 | 3 | 4 | 5 | 6 | 7 | 9 | 10 | 11 | 13 |

20. a. Two independent samples of 8 and 7 items gave the following values:

Sample A: $9 \quad 1113111591214$
Sample B: $10 \begin{array}{llllll}12 & 10 & 14 & 9 & 8 & 10\end{array}$
Examine whether the difference between the means of the two samples is significant at 5\% level.
b. A survey of 320 families with 5 children each revealed the following distributions:

No of Boys : $\begin{array}{lllllll}5 & 4 & 3 & 2 & 1 & 0\end{array}$
No Of Girls : $\begin{array}{lllllll}0 & 1 & 2 & 3 & 4 & 5\end{array}$
No Of families: $14 \begin{array}{llll}56 & 110 & 8840 & 12\end{array}$
Is the results consistent with the hypothesis that male and female births are equally probable?

| Degree of freedom | .05 | .01 |
| :---: | :---: | :---: |
| 4 | 9.488 | 13.277 |
| 5 | 11.070 | 15.086 |
| 6 | 12.592 | 16.812. |

21. a. In a sample of 8 observations, the sum of the squared deviations of items from the mean was 94.5 . In another sample of 10 observations, the value was found to be 101.7. Test whether the difference is significant at $5 \%$ level.
b. To study the performance of three detergents and 3 different water temperatures following whiteness reading were obtained with specially designed equipment:

## Water temperature Detergent $A$ Detergent $B$ Detergent $C$

| Cold water | 57 | 55 | 67 |
| :--- | :--- | :--- | :--- |
| Warm water | 49 | 52 | 68 |
| Hot water | 54 | 46 | 58 |

Perform a two way analysis of variance using $5 \%$ level of significance.
