## ANSWER ANY FIVE QUESTIONS:

11. A company has three operational departments (weaving, processing and packing) with capacity to produce three different types of clothes namely suiting, shirting and woolens yielding the profit Rs. 2, Rs. 4 and Rs. 3 per metre respectively. One metre suiting requires 3 minutes in weaving, 2 minutes in processing and 1 minute in packing. Similarly one metre of shirting requires 4 minutes in weaving, 1 minute in processing and 3 minutes in packing while one metre woolen requires 3 minutes in each department. In a week, total run times of each department are 60, 40 and 80 hours of weaving, processing and packing departments respectively.
