(i) Construct an inclusive type frequency distribution table.
(ii) Calculate the mean and test if it is statistically different from 45.
(iii) Comment on the various parameters of the distribution.
2. A study of the effect of caffeine on muscle metabolism used eighteen male volunteers who each underwent arm exercise tests. Nine of the men were randomly selected to take a capsule containing pure caffeine one hour before the test. The other men received a placebo capsule. During each exercise the subject's respiratory exchange ratio (RER) was measured. (RER is the ratio of CO 2 produced to O 2 consumed and is an indicator of whether energy is being obtained from carbohydrates or fats).
Check, whether, on average, caffeine changes RER.

| RER with Placebo | RER with Caffeine |
| :--- | :--- |
| 105 | 96 |
| 119 | 99 |
| 100 | 94 |
| 97 | 89 |
| 96 | 96 |
| 101 | 93 |
| 94 | 88 |
| 95 | 105 |
| 98 | 88 |

3. The weights (in gm) of a number of copper wires, each of length 1 metre are obtained. These are shown below classified according to the dies from which the wires come:

| Die no. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| I | II | III | IV | V |
| 1.30 | 1.28 | 1.32 | 1.31 | 1.30 |
| 1.32 | 1.35 | 1.29 | 1.29 | 1.32 |
| 1.36 | 1.33 | 1.31 | 1.33 | 1.30 |
| 1.35 | 1.34 | 1.28 | 1.31 | 1.33 |
| 1.32 |  | 1.33 | 1.32 |  |
| 1.37 |  | 1.30 |  |  |

Test the hypothesis that there is no difference between the mean weights of the wires coming from the different dies.
4. the following table is based on a random sample of persons attending the preview of a motion picture:

|  | Age below 40 | Age 40 or above |
